

## AIR POLLUTION CONTROL CASE STUDY

Application: Resort Kitchen Hood Exhaust

Representative: OEM

Project No's. J366 & J433  
The Bungalows Resort

Location: Laguna Beach, California

Problem: A new luxury resort with 5 restaurants and elegant suite accommodations, all built in close proximity. Eliminate offensive smoke, grease & cooking odors from being exhausted into the surrounding guest quarters.

Solution: Five Power Clean Models were selected to control exhaust emissions in the restaurants. The unit in the picture above is a Power Clean Model SA-0406-W-SF-C-B. Each of these multi-stage systems consists of an electrostatic precipitator with integral water/detergent cleaning to remove the smoke and grease particles. Next, TechSorb<sup>®</sup> TS-209 bonded carbon, with special impregnates, removes the odor molecules prior to exhausting outside.
